

# Titan HST

## Fire Ready

### Fire Ready Communities

Everyone across the nation needs to be ready for wildfires, including your organization. The fire may not reach your office, however, evacuations may impact your operations, and smoke may cause disruptions or even property damage.

### Ready! Set! Go!

Have a defensible space around your site, an evacuation plan, and practice with a tabletop exercise, so you can quickly execute if you see or smell smoke or have been notified by local emergency services.

### Test Your Emergency Communications Plans

Test your employee notification plan by running a drill using the script of your current evacuation protocols. Include your employees and volunteers to ensure your notification is clear and efficient for when an actual emergency evacuation occurs.

### Build a Resilient Network

Build a network of neighboring organizations that you know can help or that you can help during a local emergency. It takes a village to be resilient.

### Bridge Locations Instantly with Mass Notification

Create preset message scripts in your Titan HST broadcast section to have urgent instructions or evacuation protocols ready at your fingertips. Schedule broadcast messages ahead of time, so they are sent automatically during your drill.
